THE USER GUIDE · BUILDING YOUR CAFFEVOLVE BLUEPRINT

Building your Blueprint.
Step by step, screen by screen.

This guide walks you through the three tools of your **Caffevolve Blueprint**, the User Profile, Taste Profiles and Plan my Day, one screen at a time, in the order the device shows them. Three tools, set up once, make every brew nearly automatic.

- **User Profile** learns your reaction to caffeine
- **Taste Profiles** learn how you like your drinks to taste
- **Plan my Day** captures the drink routines of most, if not all, of your days

Built from the bottom up · brewed from the top down

ABOUT THIS GUIDE

How to read what follows

Each tool starts with a one-picture map of its whole setup, followed by the steps, organized in small groups, with the screen you'll see beside each group. The example screens use Diane, a real prototype profile. Set the tools up in order: each one builds on the one before it. For why the Blueprint matters and what a day with it looks like, see The Caffevolve Blueprint.

THE THREE TOOLS OF YOUR CAFFEVOLVE BLUEPRINT · TAP ONE TO JUMP TO IT

TOOL ONE

User Profile

Tell the Platform how caffeine affects you.

TOOL TWO

Taste Profiles

Tell the Platform how you prefer the taste of your drink as the hours of the day pass.

TOOL THREE

Plan my Day

Lay out the usual timing of your drinks, the routine you typically follow each day of the week.

– Words you'll see throughout this guide

The Platform uses a few names of its own. Here's what they mean.

Caffevolve Blueprint
Everything the Platform knows about you, from your User Profile, Taste Profiles and Plan my Day: the plan every cup is built from. The blueprint stays the same; each cup built from it is worked out fresh.

Caffeine Comfort Zone
Your personal caffeine range: enough to feel it, never so much that you feel wired or lose sleep.

Taste Profile
How you like your cup to taste during part of your day: how strong and which add-ins, during a time you choose.

Plan Check
The note that appears when you brew, showing what you planned for this time and whether your day is on track.

Rebalance for me
One button that adjusts your planned cups so the whole day fits your Comfort Zone.

Routine Plan
A planned day you've saved to repeat on certain days of the week.

STEP BY STEP

Setting it all up.

Building your **Caffevolve Blueprint**, one tool at a time.

TOOL ONE

User Profile

Helping the Platform understand the basics about you.

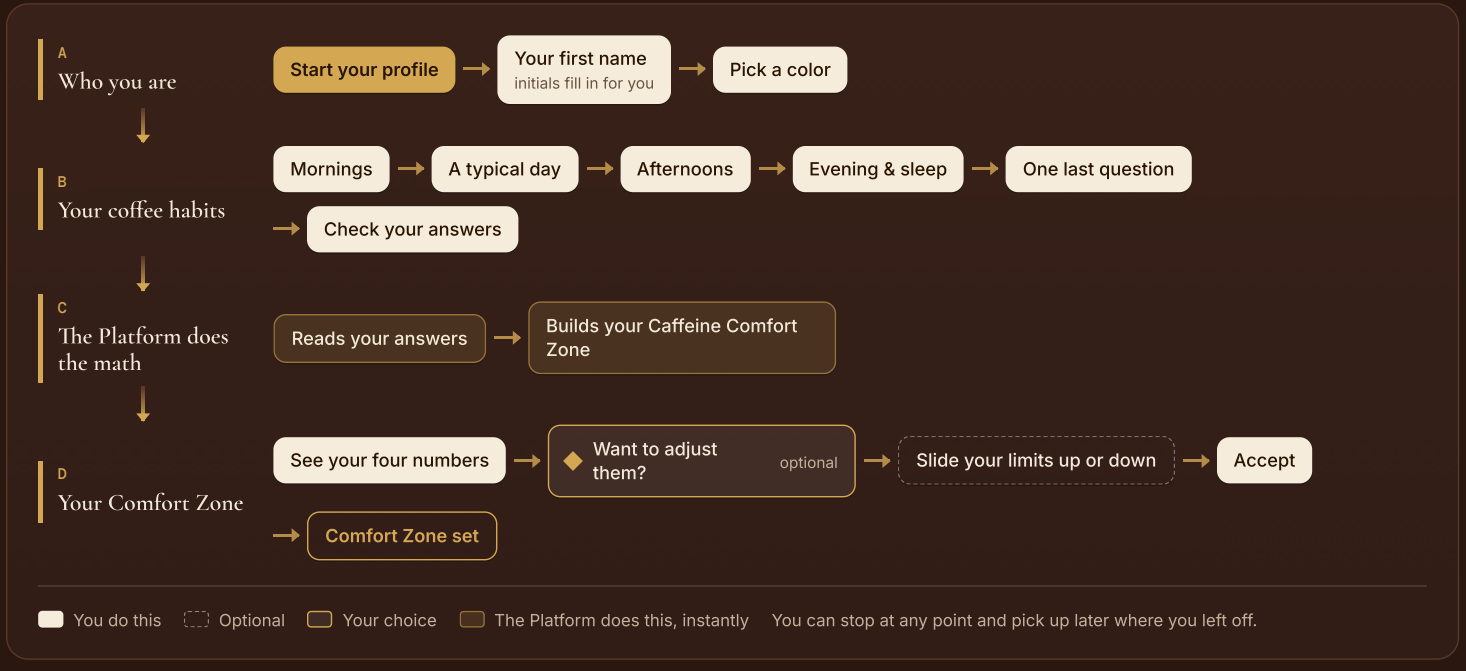

I

This first tool answers one important question: how caffeine affects you. You answer about a dozen everyday questions, and from your answers the Platform builds your Caffeine Comfort Zone and works out how fast caffeine wears off for you. Every cup it makes from then on lands inside your Comfort Zone.

WHAT IT ESTABLISHES	WHEN YOU SET IT UP	ATTENTION NEEDED AFTER THAT?
Your Caffeine Comfort Zone: where you start to feel caffeine, and your daytime and bedtime limits. **Your Caffeine Decay Rate:** how fast caffeine wears off for you.	When you first begin using the Platform, and you can change it any time. Everyone in the household or office should have their own.	Nothing required, though you can always adjust any of the tools by hand. Beyond that, the Platform reviews your User Profile now and then and fine-tunes it from your answers to short feedback questions.

The whole setup on one page

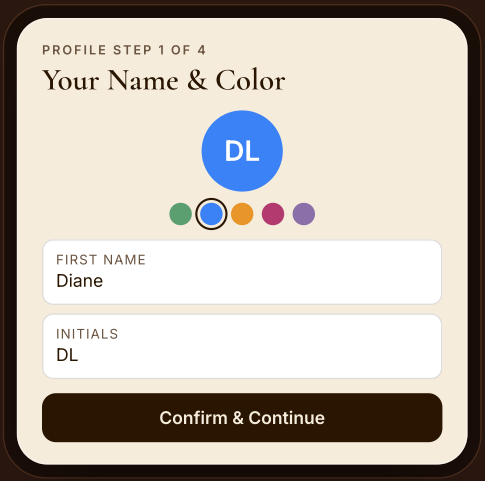

FOUR GROUPS · ONE SITTING

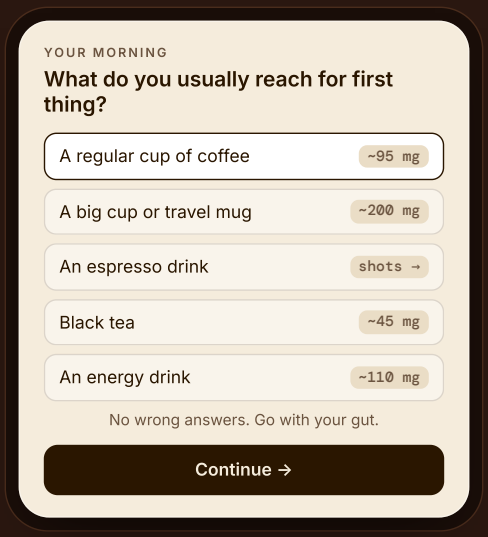

A Who you are

About thirty seconds. On a machine the whole household shares, this is how it knows whose cup it's making.

1. **Tap Let's Build Your Profile.**
   The Platform shows the four things it will set up with you.
2. **Type your first name.**
   Your initials appear on their own. Tap them if you'd like to change them.
3. **Tap the circle and pick a color.**
   Each person in the household gets their own color, so you can spot your profile at a glance.

Diane is a real profile from the working prototype. You'll follow her through this guide.

"mg" is milligrams of caffeine. A regular cup of coffee has roughly 95.

B Your coffee habits

Next come a dozen or so quick questions about the coffee, tea or energy drinks you already have. They appear one at a time, with tap-to-answer choices. Answer with your usual. There are no wrong answers.

1. **Answer each question from your gut.**
   Mornings, a typical day, afternoons, evening and sleep.
2. **Look over your answers, then tap Looks Right.**
   Tap any answer to change it first.

> **Nothing to measure, nothing to look up.** Every question is about something you already know from experience, like how many cups it takes before you feel awake. If a guess is a little off, the Platform corrects it over time.

C Your Caffeine Comfort Zone takes shape

You don't do anything here. Most caffeine advice puts you in a box, "sensitive" or "tolerant." The Platform starts instead from what your own body has already shown you: how much it takes to feel your coffee, when it's too much, how quickly it wears off, and what you still sleep well with. From those answers it builds your Caffeine Comfort Zone, the range every cup is made to fit, and works out your Caffeine Decay Rate, how quickly caffeine clears for you.

Replaying your usual day

Each drink adds caffeine, and it slowly wears off. What's left at your usual bedtime, on a day you know you sleep well, becomes your bedtime limit.

A simplified drawing, not to scale.

Example numbers. Everyone's come from their own answers.

D Your Caffeine Comfort Zone

You'll see four numbers. Three make up your Caffeine Comfort Zone: where you start to feel it, your daytime limit and your bedtime limit. The fourth, your Caffeine Decay Rate, is how fast caffeine wears off for you.

1. **If you like, tap Fine-tune my ceilings manually.**
   Slide either limit if it doesn't match how you feel.
2. **Tap Accept & Continue.**
   These are starting numbers. The Platform keeps fine-tuning them from what you tell it.

→ **That's everything about you and caffeine.** Next, the Platform asks how you like your coffee to taste, which is where Tool Two, Taste Profiles, begins.

TOOL TWO

Taste Profiles

Tell the Platform how you prefer the taste of your drink as the hours of the day pass.

II

This part is all about taste as the day goes on. Your preferred add-ins are listed once, at the end of your profile. A Taste Profile is simply a recipe for part of your day: a strong cup with collagen first thing, something gentler mid-afternoon. When that time comes around, the Platform already has that cup ready. Taste Profiles are optional: without one, you make the same taste choices yourself each time you brew.

WHAT IT ESTABLISHES	WHEN YOU SET IT UP	ATTENTION NEEDED AFTER THAT?
The brew strength and additives included in the cup for each part of your day	Right after you set up your User Profile, or any time later. Up to six Taste Profiles per person.	Nothing, unless your taste changes or new additives are available. The caffeine in each cup is still worked out fresh every time.

The whole setup on one page

THREE GROUPS · REPEAT FOR EACH TASTE PROFILE

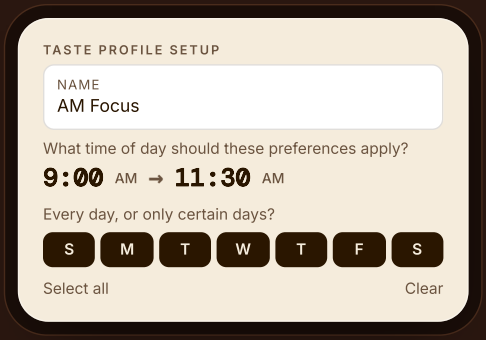

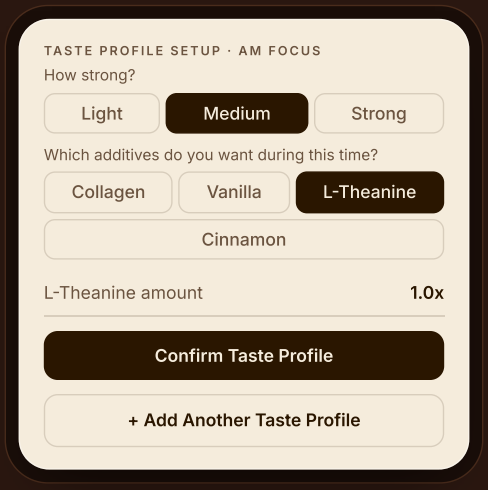

A When it applies

Think about the parts of your day that already have a feel to them: getting going, focused work, the afternoon slump, winding down.

1. **Tap Yes, let's set one up.**
   The Platform asks as soon as your profile is complete.
2. **Name the Taste Profile.**
   Call it whatever you'd call that part of your day. Diane's are AM Boost, AM Focus and PM Deflate.
3. **Set the time and the days.**
   The stretch of the day it covers, every day or just the days you choose.

> **Your taste options are there either way.** Without a Taste Profile, you choose strength and add-ins each time you brew. With one, those choices apply automatically during its time of day, and you can still change anything at the machine.

B What you get

Now describe the cup itself. You only choose how it should taste. The caffeine is handled for you, and the size comes from your plan or your choice at brew time.

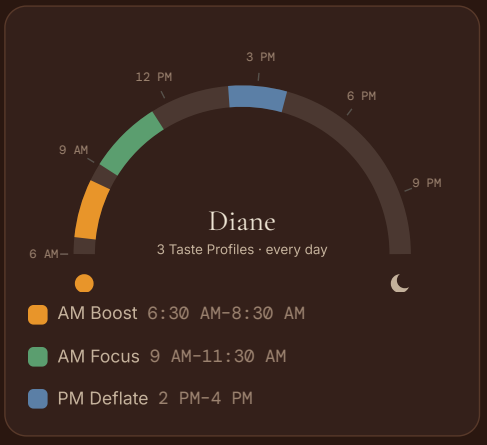

1. **Pick a strength.**
   Light, Medium or Strong. This changes the flavor, not the caffeine.
2. **Pick your add-ins.**
   From the preferred list on your profile. For example, L-theanine for focus in the morning or cinnamon in the afternoon.
3. **Tap Confirm Taste Profile to save it.**

> **A Taste Profile never locks in the caffeine.** Every time you brew, the Platform works out the right mix of regular and decaf beans from your Caffeine Comfort Zone, the time of day, tonight's bedtime and what you've already had. The Taste Profile only shapes the taste.

C Fill your week

Add a Taste Profile for each part of the day you care about. The goal is a week where your waking hours are covered.

1. **Tap + Add Another Taste Profile for the next one.**
   Up to six, one for each part of the day you care about.
2. **Tap See Complete Weekly Picture.**
   One view shows every Taste Profile across the week, so you can spot any gaps.
3. **Brew.**
   From now on, your Taste Profile's cup is ready whenever its time comes around.

Diane's three real Taste Profiles across her day, 6 AM to 10 PM.

TOOL THREE

Plan my Day

Lay out the usual timing of your drinks for the day, and if other days of the week are similar, set it up as a Routine Plan and apply it to all the similar days. Set up as many Routine Plans as you like.

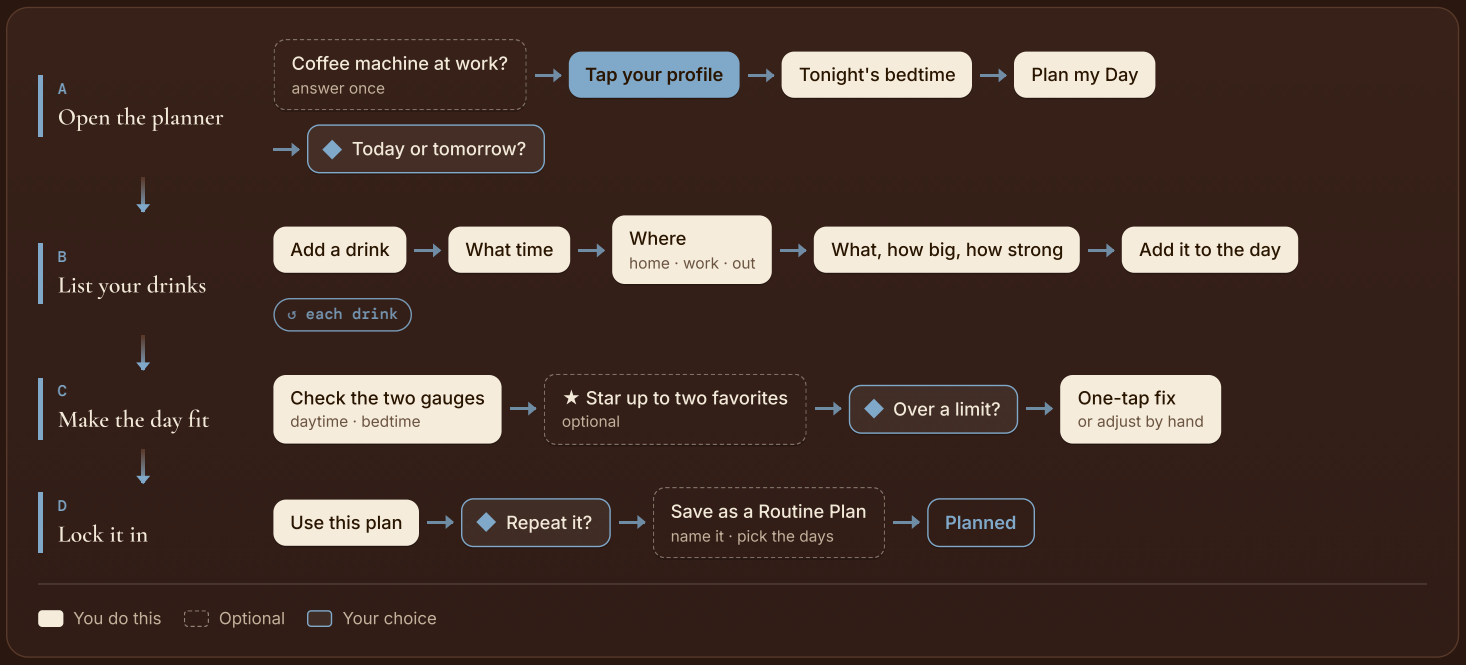

III

When a plan is not in place, the Platform works one cup at a time, fitting each cup inside your ceilings at that moment, without considering what you'll drink later in the day. With Plan my Day, it looks at everything planned for the day as a whole. You lay out what drinks you expect to have, and when you plan to have them — both at home and while out — and see right away whether the day you've planned fits within your Caffeine Comfort Zone. If it doesn't, you can adjust the blend of each drink manually or use the one-tap fix to adjust the blend of all of your cups to fit within the zone.

WHAT IT ESTABLISHES	WHEN YOU SET IT UP	ATTENTION NEEDED AFTER THAT?
How much caffeine goes into each cup across the day, so you feel good while awake and still sleep well	Anytime, and as often as you like. Set up a Routine Plan once for each kind of day, such as workdays and weekends, or plan a single day, the night before or that morning. Any plan can be changed whenever your day does.	Nothing, beyond a glance: each time you go to brew, Plan Check shows what you planned and whether your day is still on track, ready to brew in a tap.

The whole setup on one page

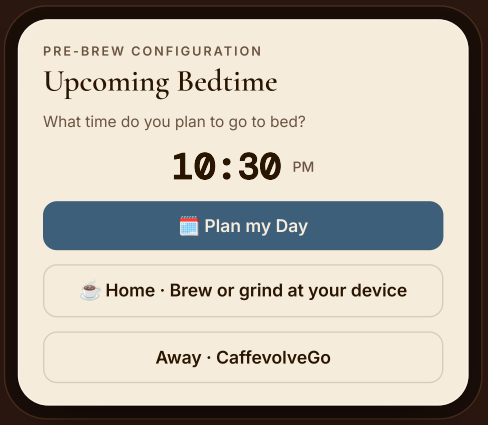

FOUR GROUPS · ONCE PER KIND OF DAY

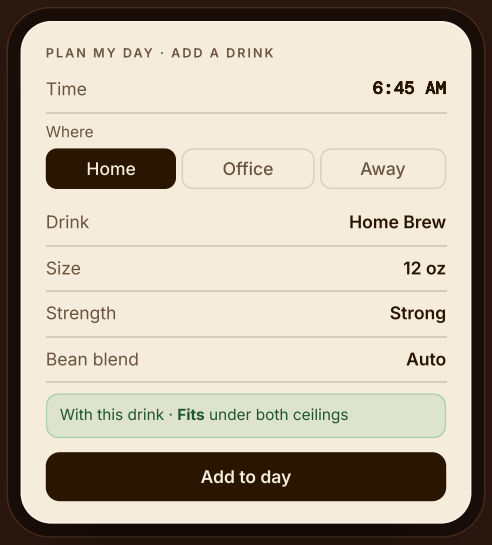

A Open the planner

Plan my Day is there to protect your sleep, so it starts with the one thing it needs to know: when you're going to bed tonight.

1. **Once: tell your profile whether there's a Caffevolve machine at work.**
2. **Tap your profile and enter tonight's bedtime.**
   You enter it with the first cup of the day. Bedtimes change, so every cup after that asks you to confirm it or change it.
3. **Tap Plan my Day and choose what to do.**
   Plan the rest of today, create a new plan for today or tomorrow, or work with your Routine Plans. Planning tomorrow the night before is the easiest habit to keep. The plan takes effect the next morning.

"Bean blend: Auto" means the Platform picks the mix of regular and decaf for you.

B List your drinks

Add every caffeinated drink you expect to have, morning to night, including the ones away from home. The day can only be balanced if it's all there.

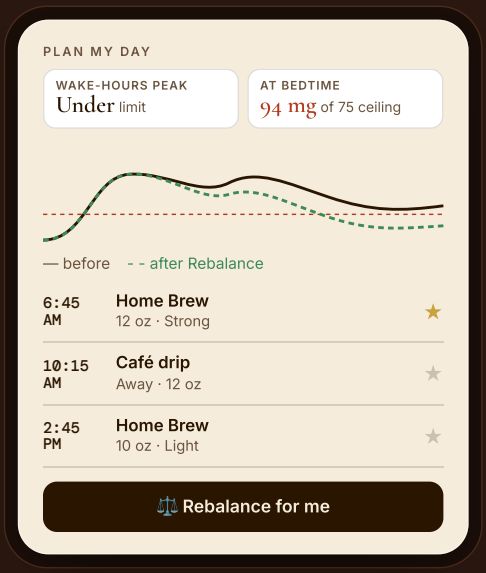

1. **Tap + Add a drink and set the time.**
2. **Say where you'll have it.**
   Home (or **Office**, if there's a Caffevolve machine at work): choose the size and strength, and let the Platform recommend the caffeine. **Away**, like a coffee shop: just pick the drink and its size. The Platform knows roughly how much caffeine it has.
3. **Check the line at the bottom, then tap Add to day.**
   It tells you right away whether the day still fits.

C Make the day fit

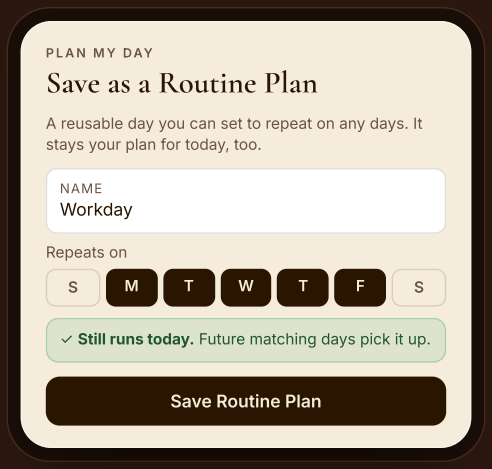

Two gauges show whether your day stays inside your Caffeine Comfort Zone: one for while you're awake, one for bedtime.

1. **Star the drinks you don't want touched.**
   Tap ★ on up to two drinks, like the morning cup you love exactly as it is. The Platform leaves starred drinks alone.
2. **If a gauge is over, tap Rebalance for me.**
   The Platform spreads the change across your other drinks, a bit more earlier, a bit less toward evening, until the whole day fits.

A real example: Diane's planned day would leave 94 mg of caffeine in her system at bedtime, more than her 75 mg bedtime limit. One tap on Rebalance brings the whole day back within both limits, without taking any single cup down to nothing.

A simplified picture of the planner. The curve shows the shape of the day, not exact amounts.

D Lock it in

A day you plan once can repeat every week.

1. **Tap This is my plan for today** (or for tomorrow).
   The plan now runs that day.
2. **Tap Save as a Routine Plan to make it repeat.**
   Name it and choose the days.
3. **Make a second Routine Plan for your other kind of day.**
   Most people need two, a workday and a weekend. Once every day of the week has a Routine Plan, there's nothing to plan in the morning.
4. **Going away? Set up a TAP.**
   A Temporary Alternative Plan sets a Routine Plan aside for a trip or a vacation, with a different plan for those days or none at all. Your Routine Plan doesn't change, and it comes back on its own when the TAP ends.

YOU'RE SET

That's the whole setup.

From here, every cup is a few taps: tap your profile, confirm or change tonight's bedtime, check the cup that's ready, and hold to brew.

> *Three tools, set up once, make every brew nearly automatic.*
