

From Complexity to a Cup

A cup held within your caffeine limits and dialed to your specific tastes — in just a few taps, every time.

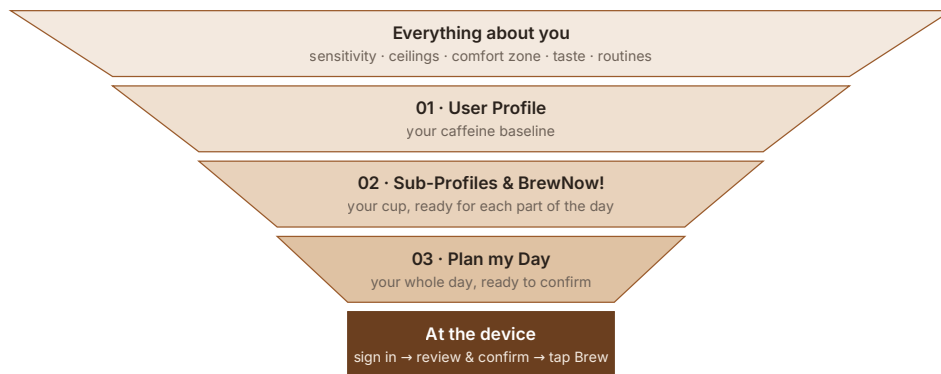

Why it has to know you — before your limits and tastes can be honored

A coffee maker that asks nothing can only pour the same cup for everyone. The two things Caffevolve is built to deliver — caffeine kept in your personal comfort zone, and a cup tailored to your exact taste — are impossible without first knowing you.

So it asks for more than a brewing machine ever has. That isn't friction to apologize for — it's the raw material needed to deliver a result nothing else on the market can produce. Calibration earns its keep in exactly one way: accuracy. A generic machine can only average; yours can be you.

The tools do the heavy lifting

Everything needed to keep your caffeine intake managed and your taste preferences honored is fed into the Caffevolve intelligence funnel. Three tool layers are available to condense and streamline this information so that each brew experience thereafter requires little more than identifying yourself, a brief drink review, and a tap to initiate the brew. Complex made simple.

The top of the funnel — everything about you

Personalized caffeine management, and a cup made to taste just as you love it. The funnel draws on: caffeine sensitivity & tolerance · comfort zone parameters · Wake Hours & Bedtime Ceilings · grind preferences · additive preferences · wellness supplement preferences · brew strength · day-of-week routines · time-of-day routines.

Tool layer 01 · User Profile — the essentials, your caffeine baseline

The User Profile collects and condenses the relevant information Caffevolve needs to manage your caffeine effectively — captured once, then recalled the instant you identify yourself.

Draws on: caffeine sensitivity & tolerance · comfort zone parameters · Wake Hours & Bedtime Ceilings · grind preferences

Already brews a good cup — stop here and you're fine.

Tool layer 02 · Sub-Profiles & BrewNow! — makes itself, your cup ready for each part of your day

Sub-Profiles save how you take your cup — serving, strength, additives — to a time window and days. During the hours a recipe covers, it applies on its own at brew time: no selection needed, you simply brew. A BrewNow! Profile is the express one-tap version, any time of day.

Draws on: additive preferences · wellness supplement preferences · brew strength · day-of-week routines · time-of-day routines

The right cup, applied for you — and still optional.

Tool layer 03 · Plan my Day — decided and safe, your whole day ready to confirm

Plan my Day is the whole-day layer: lay out the day's drinks in advance and fine-tune the caffeine of each, so the whole day stays inside your Caffeine Comfort Zone — before your first cup is enjoyed. Save a planned day as a Routine and repeat it, or build a new one for each day of the week. Now, every time you initiate a brew, the planned drink for that day/time range is suggested. Either accept it, or pick something with similar caffeine content, and tap Brew to go. That's it — complexity simplified.

Draws on: day-of-week routines · time-of-day routines

Your whole day, planned to stay within your limits — and brewed a tap at a time.

At the device — your cup, exactly

...the right caffeine, the right flavor, at the right time: **Sign in → Review & confirm → Tap Brew.**

Value from the first cup

The first cup doesn't even need a user profile — a guest brew is available immediately and offers all the same drink options; it's just a manual process. From there, each tool layer only makes the cup more personal and takes more off your plate at brew time. User information is never a precondition to a well-balanced, tailored cup.

Set your tools up once. Then every brew after is a tap or two — and out comes your cup: your caffeine blend held under your ceilings, your strength and additives creating the taste you love.
